

# OPUS LOGISTICS

## Freight Forwarding & Warehousing System

Logistics is changing rapidly, with fluctuating freight rates and more intense competition amongst trade routes. Freight forwarders and logistics companies are finding it increasingly difficult to negotiate with shippers. Success depends on a deep understanding of customers' needs and the ability to offer an advanced solution.

The highly flexible OPUS Logistics platform improves efficiency through the entire supply chain. By integrating complicated business processes and sharing of information between the participants in the supply chain, OPUS Logistics streamlines communication, increases efficiency and provides visibility to improve profitability. Seamless operations within the value chain is your competitive edge.

The OPUS Logistics solution for global freight forwarders coordinates customs/filing/shipper EDI, accounting, warehouse management and other daily operations and is accessible from anywhere in the world.

A single instance server and database deliver simple and efficient data management on a standardized, web-based platform. OPUS Logistics is highly compatible with other ERP systems, accounting and warehousing management solutions.

Global forwarding operations can be managed in one place to integrate activities across the platform. With OPUS Logistics, operational performance is maximized to provide greater efficiency.

## CREATING NEW POSSIBILITIES IN THE LOGISTRICS INDUSTRY

**OPUS** LOGISTICS

OPUS Logistics manages the entire booking process from shipping schedules, rate management, issuance of B/L to declaration for the national customs agencies. As a web-based forwarding solution, all the advanced features are introduced at a lower cost.

## **FORWARDING**

### ***Integrated End-to-End operation for more Streamlined Shipment***

OPUS Logistics (Forwarding) allows for brokerage and destination data, vessel and flight documents, customs, invoicing and accounting data to be managed in a single input and standardizes the forwarding process. This simplifies the shipping forms and integrates time-consuming processes in an inclusive business system that delivers better organizational transparency. All information is shared and viewed throughout the process, minimizing delays and potential errors.

### ***Automation for Processes Efficiency***

OPUS Logistics multi-functional applications are capable of integrating the electronic manifests between global offices, allowing for shipping document information to be entered at a single point, cutting down handling, saving time, costs and reducing errors.

These applications are integrated with multi-language, multi-currency accounting and invoicing functions to deliver the best-of-breed freight forwarding services.

### ***Global Reach. Local Insights***

OPUS Logistics is updated periodically to reflect the latest changes in the international trade documentations, logistics rules, policies and procedures. The system will convert the information and localized them based on languages, foreign exchange, invoicing, customs and more for different countries. OPUS Logistics creates specific workflows of shipments according to a predefined procedural template and provides real-time operational status of customers' orders.

## WAREHOUSING

### *Comprehensive Warehousing Management*

OPUS Logistics integrated Warehousing Management System is capable of optimizing the warehousing process with complete visibility and provide effective inventory control for 3PL, 4PL and logistics distribution.

Warehousing management reduces administrative costs, increases data accuracy with single-instance data entry, automating the rules for releasing jobs to the warehouse team, leading to improved overall delivery statistics.

The warehousing management system can be used as a fully independent stand-alone solution creating a standardized and integrated logistics management system.

## SMARTLINK

## OPUS LOGISTICS INTEGRATED WITH SMARTLINK

The integration of OPUS Logistics with SmartLink services, an independent EDI solution, creates an integrated e-Service platform to share business data between logistics partners and other organizations such as customs and port authorities, terminals and shipping liners, supporting the entire supply-chain.

SmartLink supports transmission of booking information, scheduling of 40 major shipping companies as well as S/I, Booking information and VGM, and advanced e-Manifest services to major world customs, shippers, terminals and other supply-chain partners. This substantially reduces the documentation handling lead times. SmartLink also receives schedules and container tracking updates from various sources which are relayed directly to the customers.

Today, more than 30 global logistic companies are connected with SmartLink as they share information and databases to reduce document processing time and improve their business operation efficiency.

## OUR CUSTOMER

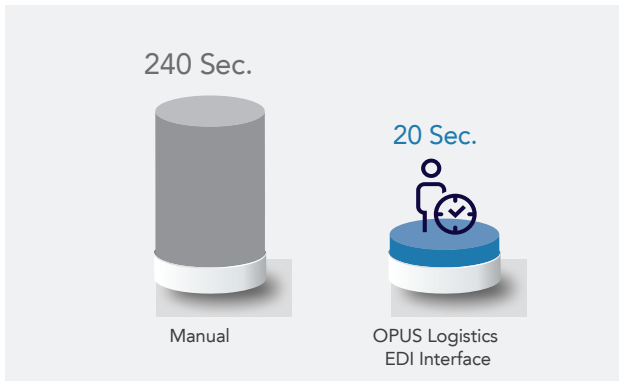

"OPUS Logistics integrates our business with customers and partners, streamlining the processes and increasing the efficiency, visibility, and profitability of our daily operation!"

Binex, CEO Mr. David Paek

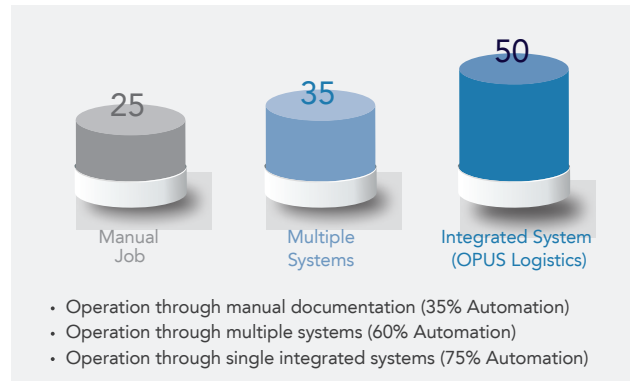

Over 1000 customers are operating with OPUS Logistics including Impex, BNX, WebTrans, Yicheng, SFI, Patent, InterFreight, Hyundai Glovis, Lotte Air&Sea, ESL, Starcluster, and many more.

### KEY BENEFITS

- Average Time Consumed on Customs/Carrier Filing (Per B/L)

- Handling Volume (\*# of B/L per day)

- Account Closing Lead Time

- Average Time Saved by Eliminating Manual Documentation
